

GLS - AutoBill - Hands Free Billing

(Pro 6.5 – 7.x SQL & VFP (SBE & EE))

02/2007

AutoBill is a feature that automatically bills orders, hands-free! This is accomplished by integration with your shipping software through the ProUPS or ProBOL (purchased separately).

Features include:

- **Setup rules for when an order should and should not automatically bill.**

As soon as an order is physically shipped, AutoBill will check the order against rules that you have created. If the order passes the rule check, the order will be invoiced in Sage Pro.

- **Automatically apply payments to the invoice.**

If payment was received when the order was placed, and a credit card number exists, or a deposit or open credit exists, the payment will be automatically applied to the invoice.

- **Schedule when and how often AutoBill will run.**

AutoBill is designed as a ProAlert using the Sage ProAlert module. Using the features of this module, you can schedule when and how often AutoBill runs.

- **Include Invoice and Packing Slip with your shipments.**

Another great feature is the ability to automatically invoice or print the invoice or packing slip. So, if the order is shipped in WorldShip or ShipManager, you can set the system up **to print the invoice and packing slip real-time and include these documents with the shipment.**
